IT and Consulting

Banking & Finance

Healthcare

Retail & E-commerce

Manufacturing

Is This Program for You?

Aspiring professionals of any educational background with an analytical mindset are most suited to pursue the Business Analyst Master's Program, including:

- Aspiring Business Analysts -including recent college graduates and those looking to make a career change.
- IT professionals
- Beginners in the data analytics domain
- Project managers
- Professionals who are performing business analysis duties, such as administrators, managers, and project leads.
- Banking and finance professionals
- Marketing managers
- Supply chain network managers

Maulikkumar Jani

RPA Business Analyst

I learned how to tackle challenges and manage my time in a better manner, I implemented the Agile methodology in my job, and I saw an almost 65% increase in productivity. I could do all this since I acquired these skills while taking the course, so if someone can apply what they are learning online, it would be a huge help. This comprehensive business analyst training enabled me to impress recruiters more effectively. Additionally, I received a 20% salary hike and successfully differentiated myself from the crowd.

Unsure If This Is The Right Fit?

Success Stories

Mohit Vishwakarma

Business Analyst

I had a fantastic and unique learning experience with Simplilearn's online lessons. The self-paced classes allowed me to take lessons whenever it was convenient for me. I was very impressed by the instructors because they were experts in their domains and had a ton of practical experience. The industry experts as instructors was one of the features of Simplilearn that I cherished the most.

Module 1

CBAP® Certification Training

Duration: 36 Hours

Module-End Project: 7 Assessments / 500+ Practice Questions Across Modules

Case Studies:

Key Learning Objectives

- Introduction to IIBA and BABOK v3
- Business Analysis Planning and Monitoring
- Elicitation and Collaboration
- Requirements Life Cycle Management
- Strategy Analysis
- Requirements Analysis and Design Definition
- Solution Evaluation
- Perspective

Topics you will learn

- IIBA Certifications (ECBA, CCBA, CBAP): Eligibility, Process & Benefits
- BABOK Framework & Business Analysis Core Concept Model (BACCM)
- Business Analysis Foundations, Techniques & Competencies
- Stakeholder Identification, Collaboration & Communication
- Requirements Classification & Business Analysis Governance
- Plan Business Analysis Approach & Methods
- Analyze Current State, Define Future State & Change Strategy
- Risk Assessment & Strategic Alignment
- Elicit, Confirm & Communicate Requirements
- Trace, Prioritize, Maintain & Approve Requirements
- Requirements Architecture, Modelling & Design Options
- Verify & Validate Requirements
- Analyze Potential Value & Recommend Solutions
- Measure & Analyze Solution Performance
- Assess Limitations & Recommend Value-Enhancing Actions
- Agile Perspective
- Business Intelligence Perspective
- Information Technology, Business Architecture & BPM Perspectives

Module 2

AI-Powered Business Analytics With Excel

Duration: 18 hours

Module-End Project: Designing a Sales Dashboard in Excel

Tools Used:

AI Plugins

Key Learning Objectives

- Introduction to Business Analytics
- Data Cleaning and Preparation
- Conditional Formatting and Important Functions
- Analyzing Data With PivotTables
- Dashboarding
- AI-Based Excel Learning
- Excel Advanced Tools: What-If Analysis and Macros

Topics you will learn

- Basics of analytics and project life cycle
- Types of analytics: descriptive, diagnostic, predictive, prescriptive
- Key domains: customer, financial, performance, risk analytics
- Excel basics: data import, cleaning, formulas, formatting
- Key Excel functions: logical, lookup, reference, statistical
- Pivot tables: features, grouping, advanced reporting
- Power Query & Power Pivot for ETL and multi-table analysis
- Data connectors & slicers for interactive filtering
- Dashboard design: principles, charts, interactivity
- What-If analysis: goal seek, data tables, scenario manager
- Macros & VBA: writing, running, scripting basics
- Spreadsheet AI: auto formula generation, tagging, summarizing
- Analyze Data tool in Excel: AI insights & use cases

Module 3

GenAI-Powered SQL for Business Analysts

Duration: 18 hours

Module-End Project: Employee Performance Mapping

Tools Used:

Key Learning Objectives

- Unleashing SQL Magic: A Dynamic Introduction to Database Mastery
- Working With Databases and Tables
- Working With Operators, Constraints, and Data Types
- Functions in SQL
- Joins, Set Operators, and Subqueries
- Window Functions in SQL and CTEs
- GenAI-Powered SQL

Topics you will learn

- Introduction to data and databases: Relational, NoSQL, Graph
- DBMS vs RDBMS
- ER modeling: diagrams, relationships, cardinality
- Data normalization & relationship types
- Database fundamentals: ACID, schemas
- Working with tables in MySQL: DDL & DML
- Data grouping, sorting & filtering: GROUP BY, HAVING, ORDER BY
- SQL data types, operators, and indexing
- Constraints: NOT NULL, primary key, foreign key
- Core SQL functions: string, date/time, aggregate
- Advanced SQL functions: window & scalar
- SQL aliases: table & column
- Joins: INNER, LEFT, RIGHT, USING
- Set operators: UNION, UNION ALL, MINUS emulation
- Subqueries & advanced subqueries
- Window functions & use cases
- SQL views vs tables, and CTEs
- Intro to AI-assisted SQL: ChatGPT, GitHub Copilot
- AI-driven query optimization: auto-indexing, execution plans
- AI tools for anomaly detection & performance forecasting

Module 4

Power BI Training

Duration: 21 hours

Module-End Project: Designing a Sales Dashboard in Excel

Tools Used:

Key Learning Objectives

- Introduction to Power BI
- Connecting to Data Sources
- Prepare the Data
- Data Modeling
- Model Calculations With DAX
- Optimize Model Performance
- Visualize and Analyze the Data

Topics you will learn

- Business Intelligence overview & data analysis foundations
- Power BI architecture and core components
- Connecting to data: Excel, CSV, SQL, APIs
- Data source configuration & model selection
- Power BI data models & modeling modes
- Cleaning and shaping data with Power Query
- Data profiling, handling issues, and best practices
- Transform, merge, append, and load data
- AI-assisted data transformation and enhancements
- Designing a data model & defining relationships
- Table/column properties, cross-filtering & date tables
- Implementing row-level security (RLS)
- Introduction to DAX, measures & aggregations
- Advanced DAX: CALCULATE & time intelligence
- Creating measures with Quick Measures
- Performance tuning: remove excess data, optimize types
- Using Performance Analyzer & summarization
- Creating reports & visualizations
- Enhancing usability & storytelling with visuals
- Using AI tools to identify trends and patterns

Module 5

RPA, Business Automation Basics and Process Mining

Duration: 3 hours

Module-end Project: Create a BRD to solve an RPA problem statement

Tools Used:

Key Learning Objectives

- Introduction to Business Automation and RPA
- RPA Tools and Capabilities
- Identifying RPA Opportunities
- Documenting for RPA Teams
- Collaborating in RPA Projects
- Process Mining for Business Analysts
- Monitoring Compliance and Analyzing Delays

Topics you will learn

- What is business automation and why does it matter for BAs?
- RPA basics: triggers, bots, workflows
- Common RPA tools: UiPath, Automation Anywhere, Blue Prism
- Key RPA capabilities & identifying good use cases
- How to spot automation opportunities across industries
- Process documentation: pseudo-code, flowcharts, best practices
- Collaborating with RPA developers and testers
- BA's role in the RPA lifecycle
- Importance of change management in automation
- What is process mining, and how does it differ from BPM?
- Identifying inefficiencies, deviations, and bottlenecks
- Benefits of process mining for BAs

Module 6

Agile and Product Thinking

Duration: 6 hours

Module End Project: Citibank US: Process automation -Agile Transitions

Tools Used:

Jira

Confluence

draw.io

creately

miro

Lucidchart

Agile Thinking and Methodologies

- Foundations of Agile Thinking
- Sample Diagrams, Documents, and Models Discussion
- Agile Practices and Tools
- Sets the Base for Practical Sessions

Product and Design Thinking

- Why Product Thinking Matters
- Areas of Business Impact
- Stakeholder Management Techniques
- Understanding Business Context and Design Challenges
- To-Be Experience Mapping and Change Management
- Tools and Frameworks for Strategic Thinking
- Design Thinking and Product Thinking for BAs
- BPMN Diagram Creation
- Prototyping and Wireframing
- Visual Modeling and Prototyping
- Business Model Canvas & Value Proposition Canvas
- SWOT Matrix, UML Use Case Diagrams, RACI, Stakeholder Mapping
- Proof of Concepts, Wireframes, Mockups Using Industry Tools

Module 7

Business Analyst Capstone Project

Duration: 6 hours

Apply your business analysis skills to real-world scenarios using SQL, Excel, Power BI, and Gen AI tools. Work on hands-on projects in fraud detection, patient readmission, and retail analytics. Gain practical experience in data extraction, analysis, and visualization to drive business decisions.

Credit Card Fraud Analytics: Identifying Unusual Spending Behavior

Use SQL, Excel, and Power BI to detect and visualize credit card fraud in real time. Analyze transaction patterns, identify anomalies, and create logic-based alerts. Leverage Gen AI tools to generate insights and summaries, enabling faster response to suspicious activities.

Patient Readmission Analytics: Identifying High-Risk Patients for Proactive Care

Create a Power BI dashboard to predict patient readmission within 30 days using SQL for data extraction and Excel for risk stratification. Visualize trends and flag high-risk cases to support timely interventions and reduce healthcare costs.

Retail Analytics: Predicting Customer Responses and Optimizing Promotions

Analyze customer behavior and predict marketing responses using retail transaction data. Use SQL to extract data, Excel for pattern analysis and segmentation, and Power BI to visualize trends and campaign responses. Leverage AI-powered tools to enhance targeting and boost ROI.

Electives

Essentials of Generative AI, Prompt Engineering, and ChatGPT

Delve into AI basics and generative AI principles. Grasp the importance of explainable AI. Employ prompt engineering to enhance generative AI performance. Understand ChatGPT's mechanisms, features, and constraints. Explore varied ChatGPT applications. Gain foresight into generative AI's future and challenges.

Microsoft Azure Data Fundamentals

This course covers key data skills, including identifying data formats, storing data in files and databases, normalizing data, and using SQL. Learners work with relational databases, Azure Blob Storage, Cosmos DB, and Synapse Analytics. It also covers data ingestion, analytical modeling, and building effective Power BI reports.
